About This Game

You wake up with no memory. Your day is starting off great!

Nepenthe is a hand-drawn RPG with a terrible sense of humor. Set in the strange world of Carithia, you play as a mysterious bald dude who lost his memory. Yes, you read that right. Meet some very polite monsters, and battle both them and your sense of self-dignity in epic bullet-hell fight scenes.

Definitely not a potato in a trench coat

Sporting a childish hand-drawn art style, Nepenthe is sure to either make you love it at first glance, or throw your computer away. The developer of Nepenthe takes no responsibility for such actions, and recommends drinking chamomile tea. "It's really soothing," he says. "You should really try it one day," he says. "What was I talking about?" He asks. There is an awkward pause.

designed for non-psychopaths, mostly

With three different endings, and countless side-quests, Nepenthe is designed for ultimate replayability. This can get quite annoying if you need to share a computer with someone else. Trust me. Almost every monster can be spared, for added challenge and less violence. They can also be killed - don't worry, you psychopaths! If you enjoy dad-jokes or Chinese water torture, Nepenthe is for you.

Nepenthe is designed for both casual and hardcore gamers alike.

-
- Explore two modes: "Adventure" or "Story," to find the play-style that best suits you.
 - "Adventure" mode is a bullet-hell extravaganza, with ever increasing difficulty as the game progresses.
 - "Story" mode's battles are easy one-click things, designed for those who just want the story, not the gameplay.
 - Enjoy stunning hand-drawn art along the way

No multiplayer. Why would you buy this if not by mistake?. I assumed this was an enchanting story based game, but i was only half right. The game was beyond my expectations in every way, the music, the story in such your actions determine the end, and the maleability of how you play.

no, really. **10/12**

I'm really excited about future updates!!. Do not buy this at full price, or at all to be quit frank. First off the main reason anyone would want to buy this is to play as scarface. Sorry to break it to you, but its a very very poor knockoff, his model is just a regular cuban man, with very mediocre voice lines. The little friend assault rifle will without a doubt for me is the worst assault rifle in the game. While boasting impressive damage, it has a terrible ammo pool of 40, not 400, 40. With a terrible ammo pickup. The grenade launcher attachment is decent, having better ammo pickup than the gun its attached to being its only saving grace. This assault rifle also practically has no customization, and would require an extremely specific set of skills to be even usable on any heist that lasts longer than 5 minutes. The perk deck is not at all what was shown to us, Do not think that when you take the injector you are invulnerable. You take reduced damage, but still nowhere near making it worth taking on any difficulty higher than mayhem. Overall this pack is nowhere near worth the \$5.00 and left me incredibly dissappointed. It felt like a cashgrab and it really shows.. Epic Horror Game!!. So you have a cursor, but your shooting is 8-directional. Because that's how you shoot in dagestan. Keep in mind these guys are making money here.. Fantastic and challenging! You will die in this game..... a lot..... but you will become addicted quickly. Well worth the price.. it's actually game of the year 2018. I nominated this for "game I thought was cool before it won an award" because I think it's cool and it hasn't won anything to my knowledge ??? The puzzles are fun and I get that satisfied feeling when I figure something out. The art is fantastic, cybertwee and whatnot. Get it dawg. Classic game. Better than XRD.

MUH CHILDHOOD. That was a pretty fun little game. :)

This would be a great multiplayer game.

And you are gonna want to get kneepads, cause it gets intense in the winter of battle.

Seems like the only thing really missing is some of the audio.. A cute little interlude for the coming main attraction: Blackenrock.

Well worth the low price.. Garbage controls. A game "created to relieve psychological stress" that actually causes more.

Controls are frustrating and overly floaty. Levels are badly designed IF they've been designed at all. Also I'm not sure you can beat the game at all.

No relaxation and the only balls are on the developer for trying to charge for this.

Quick Look: https://youtu.be/C_nwLaGhkCQ. Walking around, talking to people, doing some very light platforming and puzzles.

Wouldn't be much of a game if not for amazing vaporwave-memey atmosphere, jokes, aesthetics and great soundtrack.. ah nostalgia... great game, i finally finished it after 10 years... now i just gotta find space harrier.... Used to love these games as a kid. Doesn't get any easier though!. basically its a math, vocabulary, and geography learning game for kids.

you control a little plane and move it towards the right answers.

the game contains a short "story" mode and after that, also a challenge + a infinite mode including global leadboards for on/offline play.

because you can either play with keyboard, mouse, controller... with up to 4 players, it could also be good when you hang around with some friends!

(to see them fail at the easiest questions :D)

the internet is full of free learning games so the price of currently 8,99€ is a little excessive.

on the other hand, if you have small kids and want them to have something to play on your account, this might be a good choice.

<http://www.kogado.com/sw/contents/kuroneko/sr2017/en/>. **Build 1.08.1206 on Beta branch:**

New additions to beta branch:

- tweaks for auto-win requirements in auto resolving a challenge - previously the calculations only took into account proportion of units, so when the player had an overwhelming advantage even with weak units, auto-win was used. Now, the quality of units is taken into account as well.
- added difficulty setting which enables the player to limit allowed card number during challenges. There are 3 settings - off, 16 (player:16, AI:25) and 12 (player:12, AI:25). Additional cards would start on the discard pile and can be drawn in further rounds.
- rebalanced the difficulty bonuses values (e.g. increased bonus for smaller villager count). Overall maximum difficulty is 300%
- slowed down general world progress, giving a bit more room for different play-styles with newly introduced difficulties.
- lairs, whose units get killed, may disappear (they are not out there only to serve as a food. A lair that cannot sustain itself collapses making room for new lairs later on).
- removed Steam wrapper for Mac and Linux, hoping to achieve more stable build.
- balance across some enemy groups e.g. Mamuna group size base decreased from 4 to 3 (note that groups scale with difficulty as well).
- fix for floating orcs and goblins.

As always, the beta branch password is "KuChwaleGorda".
